Preface to the revised print xv

Preface xix

Chapter 1. Diffeology and Diffeological Spaces 1
Linguistic Preliminaries 2
Euclidean spaces and domains 2
Sets, subsets, maps etc. 2
Parametrizations in sets 2
Smooth parametrizations in domains 3
Axioms of Diffeology 5
Diffeologies and diffeological spaces 5
Plots of a diffeological space 5
Diffeology or diffeological space? 5
The set of diffeologies of a set 6
Real domains as diffeological spaces 6
The wire diffeology 6
A diffeology for the circle 6
A diffeology for the square 7
A diffeology for the sets of smooth maps 7
Smooth Maps and the Category Diffeology 8
Smooth maps 9
Composition of smooth maps 9
Plots are smooth 9
Diffeomorphisms 10
Comparing Diffeologies 12
Fineness of diffeologies 12
Fineness via the identity map 12
Discrete diffeology 12
Coarse diffeology 13
Intersecting diffeologies 13
Infimum of a family of diffeologies 14
Supremum of a family of diffeologies 14
Playing with bounds 15
Pulling Back Diffeologies 17
Pullbacks of diffeologies 17
Smoothness and pullbacks 18
Composition of pullbacks 18
Inductions 19
What is an induction? 19

Composition of inductions 19
Criterion for being an induction 20
Surjective inductions 20
Subspaces of Diffeological Spaces 22
Subspaces and subset diffeology 22
Smooth maps to subspaces 22
Subspaces subsubspaces etc. 23
Inductions identify source and image 23
Restricting inductions to subspaces 23
Discrete subsets of a diffeological space 24
Sums of Diffeological Spaces 25
Building sums with spaces 26
Refining a sum 27
Foliated diffeology 27
Klein structure and singularities of a diffeological space 27
Pushing Forward Diffeologies 29
Pushforward of diffeologies 29
Smoothness and pushforwards 30
Composition of pushforwards 31
Subductions 32
What is a subduction? 32
Compositions of subductions 32
Criterion for being a subduction 32
Injective subductions 32
Quotients of Diffeological Spaces 34
Quotient and quotient diffeology 34
Smooth maps from quotients 35
Uniqueness of quotient 35
Sections of a quotient 36
Strict maps, between quotients and subspaces 37
Products of Diffeological Spaces 39
Building products with spaces 40
Projections on factors are subductions 41
Functional Diffeology 41
Functional diffeologies 42
Restriction of the functional diffeology 43
The composition is smooth 43
Functional diffeology and products 43
Functional diffeology on groups of diffeomorphisms 44
Slipping X into $\mathscr{C}^\infty(\mathscr{C}^\infty(X,X),X)$ 44
Functional diffeology of a diffeology 45
Iterating paths 46
Compact controlled diffeology 47

Generating Families 49
Generating diffeology 50
Generated by the empty family 50
Criterion of generation 50
Generating diffeology as projector 52
Fineness and generating families 52
Adding and intersecting families 53
Adding constants to generating family 53
Lifting smooth maps along generating families 53
Pushing forward families 54
Pulling back families 55
Nebula of a generating family 56
Dimension of Diffeological Spaces 58
Dimension of a diffeological space 58
The dimension is a diffeological invariant 59
Dimension of real domains 59
Dimension zero spaces are discrete 59
Dimensions and quotients of diffeologies 59

Chapter 2. Locality and Diffeologies 63
To Be Locally Smooth 63
Local smooth maps 64
Composition of local smooth maps 64
To be smooth or locally smooth 64
Germs of local smooth maps 65
Local diffeomorphisms 66
Étale maps and diffeomorphisms 66
Germs of local diffeomorphisms as groupoid 66
D-topology and Local Smoothness 66
The D-Topology of diffeological spaces 67
Smooth maps are D-continuous 67
Local smooth maps are defined on D-opens 68
D-topology on discrete and coarse diffeological spaces 69
Quotients and D-topology 69
Embeddings and Embedded Subsets 70
Embeddings 70
Embedded subsets of a diffeological space 71
Local or Weak Inductions 72
Local inductions 72
Local or Strong Subductions 73
Local subductions 73
Compositions of local subductions 74
Local subductions are D-open maps 74
The Dimension Map of Diffeological Spaces 77

Pointed plots and germs of a diffeological space 77
Local generating families 77
Union of local generating families 77
The dimension map 78
Global dimension and dimension map 78
Global The dimension map is a local invariant 79
Transitive and locally transitive spaces 79
Local subduction and dimension 79

Chapter 3. Diffeological Vector Spaces 81
Basic Constructions and Definitions 81
Diffeological vector spaces 81
Standard vector spaces 81
Smooth linear maps 82
Products of diffeological vector spaces 82
Diffeological vector subspaces 82
Quotient of diffeological vector spaces 83
Fine Diffeology on Vector Spaces 83
The fine diffeology of vector spaces 83
Generating the fine diffeology 84
Linear maps and fine diffeology 85
The fine linear category 86
Injections of fine diffeological vector spaces 86
Functional diffeology between fine spaces 86
Euclidean and Hermitian Diffeological Vector Spaces 89
Euclidean diffeological vector spaces 89
Hermitian diffeological vector spaces 89
The fine standard Hilbert space 90

Chapter 4. Modeling Spaces, Manifolds, etc. 95
Standard Manifolds, the Diffeological Way 96
Manifolds as diffeologies 96
Local modeling of manifolds 96
Manifolds, the classical way 97
Submanifolds of a diffeological space 101
Immersed submanifolds are not submanifolds? 102
Quotients of manifolds 103
Diffeological Manifolds 105
Diffeological Manifolds 106
Generating diffeological manifolds 107
The infinite sphere 107
The infinite sphere is contractible 110
The infinite complex projective space 112
Modeling Diffeologies 116

Half-spaces 117
Smooth real maps from half-spaces 117
Local diffeomorphisms of half-spaces 117
Classical manifolds with boundary 119
Diffeology of manifolds with boundary 119
Orbifolds as diffeologies 121
Structure groups of orbifolds 121
In conclusion on modeling 122

Chapter 5. Homotopy of Diffeological Spaces 125
Connectedness and Homotopy Category 125
The space of Paths of a diffeological space 125
Concatenation of paths 126
Reversing paths 126
Stationary paths 127
Homotopy of paths 129
Pathwise connectedness 130
Connected components 131
The sum of its components 132
Smooth maps and connectedness 133
The homotopy category 134
Contractible diffeological spaces 135
Local contractibility 136
Retractions and deformation retracts 137
Poincaré Groupoid and Homotopy Groups 138
Pointed spaces and spaces of components 138
The Poincaré groupoid and fundamental group 139
Diffeological H-spaces 142
Higher homotopy groups and functors Π_n 142
Relative Homotopy 145
The short homotopy sequence of a pair 145
The long homotopy sequence of a pair 147
Another look at relative homotopy 149

Chapter 6. Cartan-De Rham Calculus 153
Multilinear Algebra 154
Spaces of linear maps 154
Bases and linear groups 154
Dual of a vector space 155
Bilinear maps 156
Symmetric and antisymmetric bilinear maps 157
Multilinear operators 157
Symmetric and antisymmetric multilinear operators 157
Tensors 158

Vector space and bidual 159
Tensor products 159
Components of a tensor 159
Symmetrization and antisymmetrization of tensors 160
Linear p-forms 161
Inner product 162
Exterior product 162
Exterior monomials and basis of $\Lambda^p(E)$ 165
Pullbacks of tensors and forms 167
Coordinates of the pullback of forms 168
Volumes and determinants 169
Smooth Forms on Real Domains 171
Smooth forms on numerical domains 171
Components of smooth forms 171
Pullbacks of smooth forms 171
The differential of a function as pullback 172
Exterior derivative of smooth forms 173
Exterior derivative commutes with pullback 174
Exterior product of smooth forms 176
Integration of smooth p-forms on p-cubes 176
Differential Forms on Diffeological Spaces 178
Differential forms on diffeological spaces 178
Functional diffeology of the space of forms 179
Smooth forms and differential forms 180
Zero-forms are smooth functions 180
Pullbacks of differential forms 181
Pullbacks by the plots 181
Exterior derivative of forms 181
Exterior product of differential forms 182
Differential forms are local 183
The **k**-forms are defined by the **k**-plots 184
Pushing forms onto quotients 184
Vanishing forms on quotients 186
The values of a differential form 186
Differential forms through generating families 187
Differential forms on manifolds 188
Linear differential forms on diffeological vector spaces 189
Volumes on manifolds and diffeological spaces 191
Forms Bundles on Diffeological Spaces 195
The p-form bundle of diffeological spaces 196
Plots of the bundle $\mathbf{\Lambda}^p(X)$ 196
The zero-forms bundle 197
The « cotangent » space 198

The Liouville forms on spaces of p-forms 198
Differential forms are sections of bundles 199
Pointwise pullback or pushforward of forms 200
Diffeomorphisms invariance of the Liouville form 201
The p-vector bundles of diffeological spaces 201
Lie Derivative of Differential Forms 207
The Lie derivative of differential forms 207
Lie derivative along homomorphisms 209
Contraction of differential forms 210
Contracting differential forms on slidings 211
Cubes and Homology of Diffeological Spaces 214
Cubes and cubic chains on diffeological spaces 214
Boundary of cubes and chains 216
Degenerate cubes and chains 221
Cubic homology 223
Interpreting $\mathbf{H}_0$ 223
Cubic cohomology 224
Interpreting $\mathbf{H}^0(X, \mathbf{R})$ 225
Integration of Differential Forms 226
Integrating forms on chains 226
Pairing chains and forms 227
Pulling back and forth forms and chains 229
Changing the coordinates of a cube 230
Variation of the Integrals of Forms on Chains 231
The Stokes theorem 231
Variation of the integral of a form on a cube 233
Variation of the integral of forms on chains 237
The Cartan-Lie formula 239
De Rham Cohomology 240
The De Rham cohomology spaces 241
The De Rham homomorphism 241
The functions whose differential is zero 242
The Poincaré Lemma for diffeological spaces 243
Closed 1-forms on locally simply connected spaces 244
Chain-Homotopy Operator 245
Integration operator of forms along paths 246
The operator Φ is a morphism of the De Rham complex 247
Variance of the integration operator Φ 247
Derivation along time reparametrization 248
Variance of time reparametrization 249
The Chain-Homotopy operator $\mathscr{K}$ 250
Variance of the Chain-Homotopy operator 251
Chain-Homotopy and paths concatenation 252

The Chain-Homotopy operator for $p = 1$ 253
The Chain-Homotopy operator for manifolds 254
Homotopy and Differential Forms, Poincaré's Lemma 254
Homotopic invariance of the De Rham cohomology 254
Closed 1-forms vanishing on loops 255
Closed forms on contractible spaces are exact 257
Closed forms on centered paths spaces 257
The Poincaré lemma 257
The Poincaré lemma for manifolds 257

Chapter 7. Diffeological Groups 259
Basics of Diffeological Groups 260
Diffeological groups 260
Subgroups of diffeological groups 260
Quotients of diffeological groups 261
Smooth action of a diffeological group 262
Orbit map 263
Left and right multiplications 263
Left and right multiplications are inductions 263
Transitivity and homogeneity 264
Connected homogeneous spaces 265
Covering diffeological groups 265
Covering smooth actions 266
The Spaces of Momenta 267
Momenta of a diffeological group 267
Momenta and connectedness 267
Momenta of coverings of diffeological groups 268
Linear coadjoint action and coadjoint orbits 269
Affine coadjoint actions and (Γ, θ)-coadjoint orbits 269
Closed momenta of a diffeological group 270
The value of a momentum 271
Equivalence between right and left momenta 272

Chapter 8. Diffeological Fiber Bundles 275
Building Bundles with Fibers 276
The category of smooth surjections 276
The category of groupoids 278
Diffeological groupoids 281
Fibrating groupoids 282
Trivial fibrating groupoid 283
A simple non-fibrating groupoid 284
Structure groupoid of a smooth surjection 284
Diffeological fibrations 288
Fibrations and local triviality along the plots 289

Diffeological fiber bundles category 290
Principal and Associated Fiber Bundles 291
Principal diffeological fiber bundles 292
Category of principal fiber bundles 295
Equivariant plot trivializations 296
Principal bundle attached to a fibrating groupoid 297
Fibrations of groups by subgroups 298
Associated fiber bundles 299
Structures on fiber bundles 301
Space of structures of a diffeological fiber bundle 302
Homotopy of Diffeological Fiber Bundles 305
Triviality over global plots 305
Associated loops fiber bundles 309
Exact homotopy sequence of a diffeological fibration 311
Coverings of Diffeological Spaces 314
What is a covering 314
Lifting global plots on coverings 315
Fundamental group acting on coverings 315
Monodromy theorem 317
The universal covering 317
Coverings and differential forms 319
Integration Bundles of Closed 1-Forms 320
Periods of closed 1-forms 320
Integrating closed 1-forms 322
The cokernel of the first De Rham homomorphism 324
The first De Rham homomorphism for manifolds 327
Connections on Diffeological Fiber Bundles 327
Connections on principal fiber bundles 328
Pullback of a connection 331
Connections and equivalence of pullbacks 332
The holonomy of a connection 333
The natural connection on a covering 336
Connections and connection 1-forms on torus bundles 336
The Kronecker flows as diffeological fibrations 340
R-bundles over irrational tori and small divisors 341
Integration Bundles of Closed 2-Forms 345
Torus bundles over diffeological spaces 345
Integrating concatenations over homotopies 348
Integration bundles of closed 2-forms 349

Chapter 9. Symplectic Diffeology 359
The Paths Moment Map 363
Definition of the paths moment map 363
Evaluation of the paths moment map 364

Variance of the paths moment map 366
Additivity of the paths moment map 366
Differential of the paths moment map 366
Homotopic invariance of the paths moment map 366
The holonomy group 367
The 2-points Moment Map 369
Definition of the 2-points moment map 369
The Moment Maps 370
Definition of the moment maps 370
The Souriau cocycle 371
The Moment Maps for Exact 2-Forms 373
The exact case 373
Functoriality of the Moment Maps 374
Images of the moment maps by morphisms 374
Pushing forward moment maps 375
The Universal Moment Maps 377
Universal moment maps 377
The group of Hamiltonian diffeomorphisms 377
Time-dependent Hamiltonian 379
The characteristics of the moment maps 381
The Homogeneous Case 382
The homogeneous case 382
Symplectic homogeneous diffeological spaces 383
About Symplectic Manifolds 385
Value of the moment maps for manifolds 385
The paths moment map for symplectic manifolds 386
Hamiltonian diffeomorphisms of symplectic manifolds 387
Symplectic manifolds are coadjoint orbits 388
The classical homogeneous case 390
The Souriau-Nœther theorem 391
Presymplectic homogeneous manifolds 392
Examples of Moment Maps in Diffeology 395
Examples of moment maps in diffeology 395
Discussion on Symplectic Diffeology 421

Solutions to Exercises 425

Afterword 513

Notation and Vocabulary 517
